

Competency/Goal/Standard → Assessment → Learning Objective Alignment Worksheet

Author: Rauf Shah, MS, Ph.D.

Lead Health Data Coordinator Level II, Division of Oncology and Hematology

MPH-EPI Student, College of Public Health

University of Nebraska Medical Center, USA

Date: Oct 10, 2025

Part 1

The learning objective should be specific, measurable statements written in behavioral terms. Learning objectives describe what the learners should be able to achieve at the end of a learning period. The objective lets us know if assessment criteria were met, and if aligned correctly, we know that the competency was met.

Step 1: Create five objectives using the four parts of an objective, as shown in the course module/video and text below.

- **Condition:** Describe the conditions under which the learner will be expected to perform in the evaluation situation (lesson, module, training, week, etc.)
- **Who:** Define who will be expected to perform (Student, participant, etc.)
- **Behavior:** Describe the observable action using an appropriate **verb** (Bloom's Taxonomy) along with the task
- **Criterion:** Make clear how well a learner must perform to be judged adequate

1.	After a lecture, students will write a four-part learning objective with 100% inclusion of all four parts.
2.	After a rubric overview, students will create an analytic rubric with all required components.
3.	After a calculation demo, students will calculate an incidence rate with $\geq 90\%$ accuracy.
4.	After a dashboard demonstration, students will interpret a cancer registry trend visualization with $\geq 90\%$ accuracy.
5.	After reviewing data-ethics and patient-confidentiality guidelines, students will compose a data-use statement meeting all privacy-compliance requirements.

Part 2

In Part 1, you created measurable learning objectives. Now, you will align the five objectives to the discipline standards/goals or competencies that apply to the learning objectives and the assessment activity that you will use to collect evidence. Competencies serve as the basis for skill standards that specify the *level of knowledge, skills, and abilities* required for success in the academic program, as well as measurement criteria for assessing competency. If you are teaching, you should have program goals, competencies, or standards to use for alignment. If you are not teaching, please contact the instructor for guidance.

Competency/Goal/Standard → Assessment → Learning Objective

	←Competency/Goal/Standard →	←Assessment→	←Learning Objective→
1.	Course Goal (Instructional Design): Construct learning modules using best practices.	Objective-writing exercise (accuracy check)	After a lecture, students will write a four-part learning objective with 100% inclusion of all four parts.
2.	Course Goal (Assessment Design): Build analytic rubrics aligned to objectives and tasks.	Rubric submission (component check)	After a rubric overview, students will create an analytic rubric with all required components.
3.	MPH Competency - Data & Analysis: Apply biostatistics to public-health datasets.	Calculation item (≥90%)	After a calculation demo, students will calculate an incidence rate with ≥90% accuracy.
4.	MPH Competency - Communication: Interpret and report analytic findings.	Interpretation item (≥90%)	After a dashboard demonstration, students will interpret a cancer registry trend visualization with ≥90% accuracy.
5.	MPH Competency - Ethics & Equity: Apply ethical principles to data use.	Data-use statement (compliance check)	After reviewing data-ethics and patient-confidentiality guidelines, students will compose a data-use statement meeting all privacy-compliance requirements.
