

Teaching Philosophy - Philosophies Worksheet

Author: Rauf Shah, MS, Ph.D.

Lead Health Data Coordinator Level II, Division of Oncology and Hematology

MPH-EPI Student, College of Public Health

University of Nebraska Medical Center, USA

Date: Sep 07, 2025

Questions	Teaching Philosophy #1	Teaching Philosophy #2
Theory Name	Progressivism	Existentialism
Why does the teaching philosophy resonate with you?	Progressivism resonates with me because it focuses on learning through real-world experiences, encouraging critical thinking and collaboration, just as I do when interpreting complex health data and addressing public health challenges.	Existentialism resonates with me because it values personal choice and authenticity, which aligns with my commitment to respecting individuality and empowering learners and patients to take responsibility for their own decisions.
Teaching and/or learning example of the philosophy #1	In our team meeting, I led a discussion analyzing cancer incidence data to identify patterns and suggest actionable interventions that could promote health equity in our local healthcare setting.	During one of our monthly meetings, I facilitated reflection on ethical dilemmas in oncology, encouraging colleagues to consider how their personal values influenced decisions about prioritizing limited treatment resources.
Teaching and/or learning example #2 of the philosophy	I guided a team discussion about how to use cancer data to help communities stay healthier.	In our research group, we reflected on how tackling tough ethical questions in oncology shapes our commitment to acting with integrity and personal responsibility in patient care.
What artifacts or proof support your examples?	Case study reports, group presentations, and journals capturing how decisions were made.	Reflective essays, personal writings, and discussion notes showing exploration of values and ethics.
Additional thoughts or questions to address before completing my teaching philosophy paper.	How can I use active, student-centered approaches while still covering the detailed technical content in oncology and epidemiology?	Balancing personal meaning and growth with meeting essential public health skills and standards is a constant reflection.
